Attn: Mr. John Glazebrook

SUBJECT: Materials being used to level & grade 19 acre park site at 109th & Roberts Rd.

Serious concern is being expressed regarding the type and quantities of materials being used to level and grade the 19 acre Park Site located in the vicinity of 109th & Roberts Rd. It is understood that the only type of materials that will be dumped shall be of organic materials with the exception of trees and wood chips accumulated from city projects. The balance of materials will be confined to concrete, asphalt paving, stone clay, loam and black dirt. No concrete, asphalt, or stone shall be dumped unless there shall be cover of at least one foot of clay, loam or black dirt.

To alleviate the expressed concerns, I am directing that you maintain a daily log that will be readily available at the site. A copy of that log consisting of every seven days will be submitted to my office weekly, no later than Monday of the preceding week.

The top page of the log shall have the date.

Below that:

There shall be a column to show the time.

There will be a column to enter the name of the trucking firm. (this will also include city owned vehicles.)

There will be a column to enter the cab license no.

There will be a column depicting the type of materials being dumped

There will be column to show where the material was picked up.

It is important that if this operation is to continue, that this log be maintained and recordings be made as trucks arrive.
